

Process Recommendations Disclaimer

Dynatronix makes no warranty as to the accuracy of the information contained herein. Information has been compiled from numerous sources and may be subject to inaccuracies. Dynatronix reserves the right to make changes and/or corrections to the data herein.

Information presented consists of generally-accepted operating parameters used in the metal finishing industry. This information is provided for convenience only, and is not to be construed as specific recommendations by Dynatronix, Inc. Power supply recommendations are for initial settings when first setting up the process. Actual operational settings may vary depending on the substrate, chemistry, operating parameters, and actual testing by the end-user.

Effective: March 20, 2013
